

## With CIFA Vista the Job Site Enters a New Era

*The new system for managing maintenance, emergency breakdown assistance and machinery operation*

Senago (Milan, Italy), 2nd December 2020 – CIFA continues along the path of innovation and work site digitalisation, with the launch of a new technology: **CIFA Vista**.

*“It would be reductive to describe CIFA Vista merely as a technological innovation, as it is a new concept of machinery management: a system that enables fleet control, maintenance programming, distance diagnostics and troubleshooting, remotely and from a single view point”, Marco Polastri, Sales, Aftersales and Marketing Director at CIFA, explains.*

**CIFA Vista is the new remote machinery monitoring system:** in terms of hardware it consists of an electronic control unit that collects data from the machine and with a data SIM sends it to the software, which thanks to a simple and intuitive interface, enables the monitoring of position, activities and different operation parameters of fleet machinery, thus facilitating troubleshooting and the programming of interventions. The main functions involve:

- **After-sales services management**
- **Preventive maintenance**
- **Troubleshooting/ intervention**
- **Monitoring of machinery functions/ activities**

Both real time data and data sourced from the machine log are available, so as to compare and keep the evolution of multiple parameters under control, such as daily production output or fuel consumption. Each user (dealer or end customer) has full information on his machinery to hand and access to data to enable **the programming of preventive maintenance**, based on the amount of concrete pumped and hours worked. Another characteristic of the system is its ability to **simplify distance diagnostics operations** and consequently **act on the problem**, thus **determining a significant reduction in machine downtime**. In this way machine longevity and work continuity are both guaranteed.

Anti-theft functions are also available for the setting of alarms linked to position or hours, typically at night, so that specific notifications are activated whenever the machine is moved beyond pre-set areas or times.

CIFA Vista is available for pump trucks, concrete pumps and will be extended to the entire range.

### About CIFA

CIFA is a leading manufacturer of concrete-working machinery and equipment with a consolidated presence in the Italian and global markets. CIFA has been part of the Chinese industrial group Zoomlion since 2008 and is an international company with sales and support networks all over the globe. The company provides its customers not only with reliable, high-quality products but also with financial support through Zoomlion Capital.
